To Whom This May Concern:

RE: Moducan Corporations' Phoenix Modular Tactical Systems

The United States and the world are dealing with many natural disasters, such as earthquakes, hurricanes, tsunamis, typhoons, etc. causing significant damage to dwellings causing destroyed homes, buildings, hospitals, governments agencies, e.g., FEMA, and non-profits like American red Cross, needing access to portable, easily assembled, structurally strong, reusable structures, which can be stored and transported with minimal space, creating immediate habitability. During Hurricane Katrina, it unfortunately took months for the transportation of modular homes to the disaster area(s) which have a limited life and are seldom reusable. The ultimate recurring costs to the taxpayers are hence exorbitant. What we need is a potential structure, assembled with minimal tools and needing few people to erect, the portability of being able to make such structures small (homes), shelters, or larger (surgical suites), and wherein the parts can be transported compactly and efficiently with via trucks, air, or sea containers.

On January of this year, I visited Palm Springs and had the opportunity to personally view the Phoenix Modular Tactical System prototypes. The good news is that this new product is being engineered right here in the United States and will soon be ready to be manufactured satisfying all the characteristics noted above.

I strongly support the research and development conducted by Mr. Guy Assif and the Moducan team on this carefully engineered and tested modular system that can help cities, counties, states, and other countries to quickly respond to a catastrophic natural or man-made disaster, saving lives and providing support and protection to affected communities, to our first responders, and to our men and women in uniform.

Sincerely yours,

A handwritten signature in blue ink that reads "Jeff Stone".
